

# Teifs WALL SYSTEMS

## Teifs WEATHERTIGHT VNT Wall System

This multi-barrier system is highly effective at keeping out air and moisture. The Teifs lamina (reinforcing mesh, base coat and finish coat) is the first line of defense, beating accelerated weathering requirements by over 3,000 hours. Next, vertical notches of adhesive allow moisture to drain to the drainage track or flashing and then out the wall system. TeifsWEATHERSEAL, a special 100% acrylic air shield and waterproof coating, is applied over the substrate for added protection. In conjunction with proper flashing and sealants, all the components of the TeifsWEATHERTIGHT VNT Wall System work together to ensure a substrate free from the damaging effects of weather and enhance the insulation value of your wall.
